CCDC NEWSLETTER

DAY CARE DATA NOW AVAILABLE

A special tabulation of 1980 Census data has been completed which looks at the number of children in families that may need day care services. This special tablulation was prepared at the request of the Connecticut Association for Human Services (CAHS), a private non-profit education and research organization, for its book "Caring For the Children."

The data tabulations were jointly prepared by the Institute for Social Inquiry at the University of Connecticut and the Connecticut Census Data Center within the Office of Policy and Management.

In Connecticut there may be as many as 93,640 children under six years of age that could use day care services as of 1980. The City of Hartford has the highest number of children likely to need day care. That figure is estimated to be 8,520. "Caring For the Children," will compare that figure with the number of licensed slots for day care in Hartford, and will report similiar comparisons throughout the state.

Infants and toddlers (those under 3 years of age) represent the smallest group needing day care services. The statewide estimate is 44,480. As "Caring For the Children" will report however, there is a particularly large gap between need and available services for this age group.

The remaining pre-school age children (those ages 3 to 5, including those attending Kindergarten) are estimated at 49,160, and those at elementary school age (between 6 and 12) are estimated at 185,160.

The data has been arranged into various family settings which would suggest the need for day care services. The first group is the married couple family in which both parents work. The next two groups are families with only one parent (male and female presented separately) and that parent works. The last group consists of families with only one parent (male and female combined) and that parent is in the labor force but unemployed. Each of these groups are arranged by the ages of the children.

This information is available for the state as a whole, the major cities in Connecticut and areas of 100,000 persons or more called Microdata Regions. Those microdata regions are closely associated with the regional planning areas in Connecticut.

For a more indepth look at day care services, needs and policies within Connecticut, contact the CAHS at (203) 522-7762 to obtain a copy of "Caring For the Children", which will be available in early, 1987.
